

Current Sidewalks Conditions: Distress Points

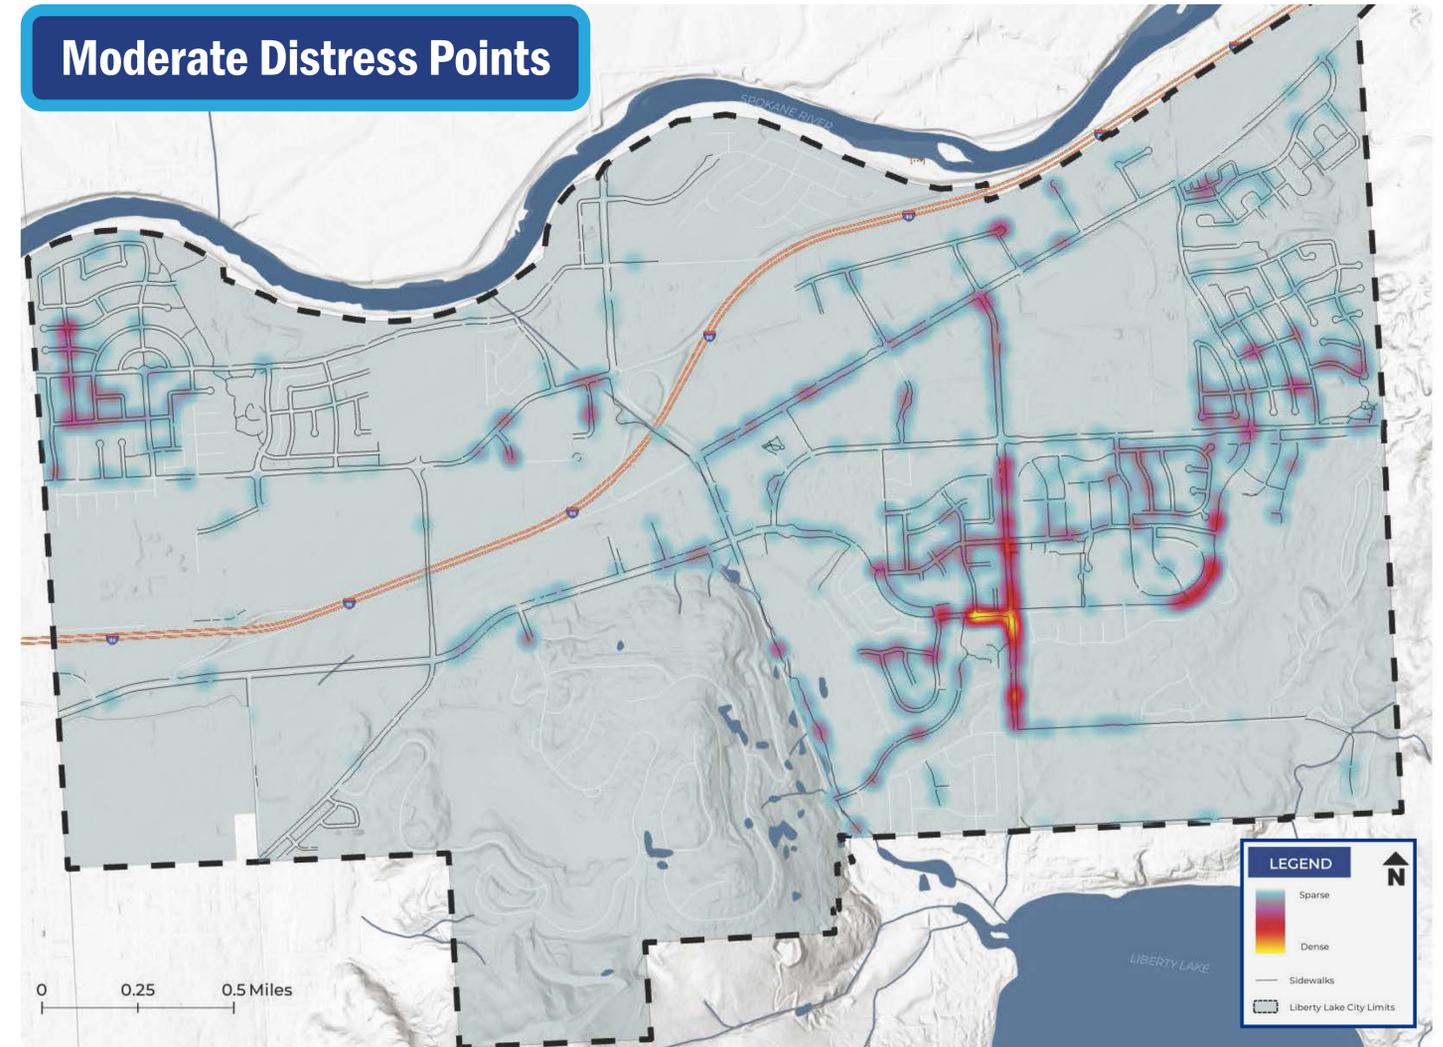

Severe Distress Points

Severe Distress Points

Severe distress describes sidewalk panels which must be replaced due to large crack, surface distortion, or major vertical uplift. About 10% of locations were found to be severely distressed.

Moderate Distress Points

Moderate Distress Points

Moderate distress describes sidewalk panels where smaller cracks are present and/or there is a minor amount of vertical uplift. These may be sealed or repositioned without replacing the panel. About 22% of locations were found to be moderately distressed.
